Front Diffusion 1 (1.5 Stop)	1
Front Diffusion 2 (2.5 Stop)	1
Fabric Light Control Grid (45°)	1
Speed Ring Adapter	1
Carrying Bag	1

Product Description

The Light OctaDome 120 is a 120cm (47.2in) Bowens Mount Octagonal Softbox. This 8-sided softbox transforms any point source Bowens Mount light fixture into an ultra-soft area light, blanketing your set in diffused light. Its large 120cm diameter also pairs perfectly with high-output fixtures to create the ultimate soft source, such as the Aputure LS 1200d Pro, 600d Pro, or 600x Pro.

The Light OctaDome 120 includes two diffusion strengths (1.5 and 2.5 stops) and an inner baffle to allow users to fine-tune their intensity and light quality.

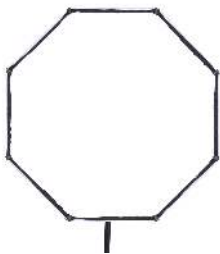

Its 8-sided structure also makes it the perfect softbox for on-the-go shooting, combining its flat-pack ability, lightweight construction at only 1.7kg (3.75lbs), and the ideal balance between a square frame or a fully circular softbox.

Target Audience

The Light OctaDome 120 is ideal for cinematographers and photographers who need a compact and portable alternative to a 4x4 diffusion frame. Its 8-sided frame is a familiar friend of any cinematographer or photographer.

For any shooter that is always on the go, the Light OctaDome 120 also packs flat like the Aputure Light Dome SE or Light Box 60x90, making it an easy and portable travel companion. And particularly for those on-location shoots that need a faster setup, the Light OctaDome 120 only has 8-sides, meaning you can set up in half the time of a Light Dome SE.

If space is a problem, it spans a 120cm (47.2in) width, making it larger than the Light Dome SE, for the perfect amount of softness, but smaller than a Light Dome 150, so it can fit in tighter spaces.
